

# Talc lubricant for seed planters

## Contains fine grade talc

Glider-T helps seed flow through air planters and maintains metering performance.

**CAUTION:** Follow seed treatment manufacturer's precautions when handling planter parts coated with seed treatments. Wear proper protective clothing as well as skin, eye and respiratory protection as indicated on the seed treatment label.

**DIRECTION FOR USE:** Glider-T should be applied on pre-treated seed to insure that the talc adheres to the seed properly while minimizing buildup on meter components. If buildup still occurs, contact the seed treatment manufacturer or the seed planter manufacturer for assistance.

Use according to equipment manufacturer's recommendations. Glider-T should be mixed thoroughly while seed is being placed in hoppers. Certain seed types, temperature and humidity levels will affect seed flow. Adjust the rate as necessary so all seeds become coated with Glider-T, while avoiding an accumulation of material in bottom of the hopper. Increase the rate for small seed sizes, very large seed corn, seeds with heavy treatment, or for humid planting conditions. If a coating of seed treatment is found on seed disks, increase the amount of talc. If material builds up in bottom of the hopper and vacuum manifolds require frequent cleanout, reduce rate accordingly.

### KEEP OUT OF REACH OF CHILDREN

**IMPORTANT:** Clean out any buildup of material on screens and meters between hopper fill-ups or as needed. High-oil-content treatments are not recommended. Do not apply Glider-T with farmer-applied drill box seed treatments that already contain talc.

**EMERGENCY TELEPHONE NUMBER:** All hours (613) 787-5620 ONLY for health and environmental information.

**NOTICE TO BUYER:** Seller's guarantee shall be limited to the terms set out on the label and subject thereto, the buyer assumes the risk to persons or property arising from the use or handling of this product and accepts the product on that condition.
