

**ANCHOR<sup>®</sup> SEED PROTECTANT**

**THE PRODUCT:**

ANCHOR is a seed protectant registered for use on soybeans, peas and lentils. ANCHOR mixes uniformly and adheres well to the seed. ANCHOR’s unique formulation allows seed to flow freely, even before the product has dried. ANCHOR is a ready-to-use product containing the two active ingredients, carbathiin (Vitavax) and thiram.

Carbathiin is a systemic fungicide that moves into the germinating seed to provide disease protection within the seedling. Thiram, a contact fungicide, surrounds the seed in a coat of protection from diseases that come into direct contact with the seed.

**START YOUR SEED OFF RIGHT:**

ANCHOR is very effective against a broad range of seed and seedling diseases. ANCHOR will generally increase emergence and plant stands by reducing seed-borne seed rots and seedling blights.

**ANCHOR IS REGISTERED ON THE FOLLOWING CROPS:**

ANCHOR can be used on the crops listed below. ANCHOR is a proven seed protectant for control of diseases that affect germination, emergence and crop stands.

<b>SOYBEANS</b>	<b>ANCHOR</b>
Rhizoctonia	<b>YES</b>

**THIRAM 75 WP AND PRO-GRO®**

**THE PRODUCTS:**

**THIRAM 75 WP is a wettable powder fungicide for control of fungal diseases on crops. It can be used as a seed protectant but can also be applied as a foliar for apples, peaches, plums, strawberries, celery, and sweet potatoes. The seed protectant uses are listed below. THIRAM 75 WP can be applied as a slurry treatment.**

**PRO-GRO is a seed protectant used on onions only for protection of smut control of onion. If a coating material is to be added, PRO-GRO must be applied before the coating material. PRO-GRO must be in direct contact with the seed or disease control may be inadequate.**
