

## AGROX B-2 SEED PROTECTANT

### THE PRODUCT:

**AGROX B-2 is a ready-to-use drill box insecticide-fungicide seed protectant which contains two active ingredients including diazinon and captan.**

**AGROX B-2 protects beans (all types including Lima, Snap, Field), soybeans, corn and peas from seed corn maggots, seed rots, seedling blights and damping off. Do not use on seed already treated with an insecticide. Seed within one month of treatment.**

### APPLICATION RATE & TIPS:

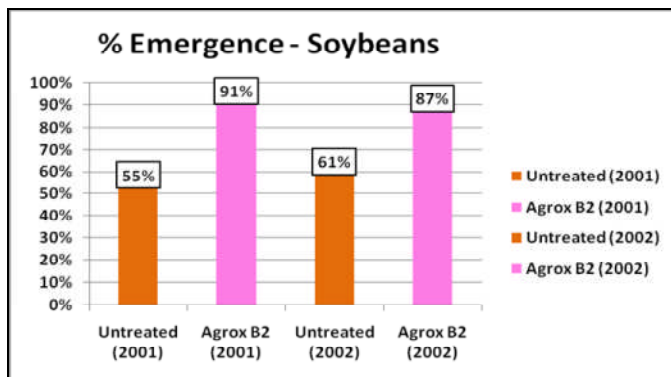

***For dry application:* AGROX B-2 is applied to seed at an application rate of 80 grams/25kg of seed as a dry application for peas, beans, and soybeans. For corn, apply 85 grams/25kg of seed.**

***For slurry machines:* mix 250 grams of Agrox B-2 per litre of water. Apply 310ml of this slurry to 25kg of seed. For corn, apply 315ml of slurry to 25kg.**

***For batch mixing:* for every 25kg of seed, mix 84 g of Agrox B-2 with 500 ml of water. Keep mixture agitated and seed treatment in suspension in the water, pour over the seed and mix with a paddle or stick until uniformly coated. Allow to dry before seeding or bagging.**

**To improve seed flow, add Glider G graphite seed lubricant according to label and adjust seeding rates if required. Treated seed may reduce seeding rates.**

### PRODUCT PERFORMANCE:

**In trials on soybeans, AGROX B-2 provided excellent insect and disease control and increased emergence which leads to increased yields compared to untreated**

## AGROX CD SEED PROTECTANT

### THE PRODUCT:

**AGROX CD is a ready-to-use drill box insecticide-fungicide seed protectant which contains two active ingredients including diazinon and captan. AGROX CD can be used on seed previously treated with fungicide but should not be used on seed already treated with an insecticide.**

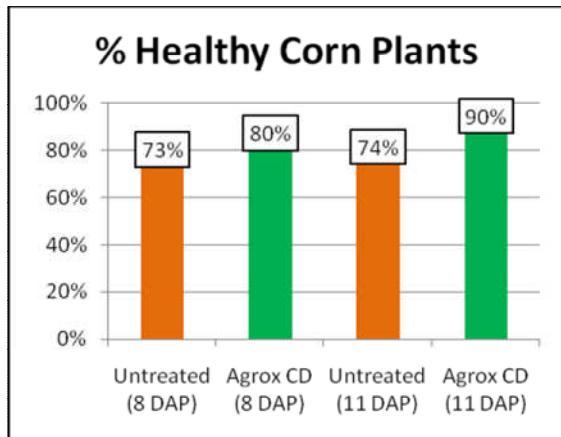

**AGROX CD protects corn, beans (all types including Lima, Snap, Field), soybeans, and peas from seed corn maggots, seed rots, seedling blights and damping off. Seed within one month of treatment.**

### APPLICATION RATE & TIPS:

***For dry application:* AGROX CD is applied to seed at an application rate of 50 grams/25kg of seed (Use 200 grams per 100kg (4 units of corn seed)). Either pretreat seed in a disposable container or treat seed directly in the planter box or drill.**

**AGROX CD is formulated with graphite, however if seed flow needs to be improved add Glider G graphite seed lubricant according to label and adjust seeding rates if required. Treated seed may reduce seeding rates.**

### PRODUCT PERFORMANCE:

In trials on corn, AGROX CD provided excellent insect & disease control providing healthier corn plants compared to untreated seed.  
“DAP” = DAYS AFTER PLANTING.

AGROX CD AND AGROX B-2 can both be used for certified seed and for on-farm uses. AGROX products are convenient as dry application products and can be used right up to planting time.
